

**How can Curatrix Managed Security  
help your business?**

## Security as Standard

Curatrix Managed Security has put together industry-leading Security solutions to develop various all-in-one package to counter the growing number of data breaches, through continual network monitoring, server activity analysis and cloud-based cyber threat detection. By basing our solutions around modular deployments, we can allow organisations to combine various modules to protect their most critical elements and to comply with relevant Security or Data Protection regulations, such as GDPR.

### Security Operations Centre (SOC)

---

Curatrix Managed Security extends your existing ICT resource capacity to provide enhanced security solutions that protect your applications, systems and networks. We deploy advanced, fully managed security solutions that do not require large upfront investments to protect and secure your data infrastructure. Our services are designed to absorb the time-consuming and complex security incident investigation process, offloading the high costs of an in-house security team and ensuring that you can meet strict compliance in all sectors.

Our SOC provides:

- Complete threat investigations and analysis
- Threat assessment reports identifying risks
- Reverse malware and suspect application engineering
- PCI compliance and vulnerability scans
- Malware Monitoring, Reporting and Remediation
- Vulnerability Monitoring, Reporting and Remediation
- DDoS Protection
- Application Intelligent Network
- Human Security Analysis and Response
- 24 / 365 Fully Managed Security

## Cyber Essentials as a Service

Cyber Essentials is a government-backed scheme that promotes good baseline security practices to help organisations protect themselves from Cyber attacks. In 2018, most government based tenders will require as a minimum that organisations hold the Cyber Essentials certification and demonstrate a commitment to securing their infrastructures and protecting their customers data.

As part of our commitment to delivering Security Centric support services, Curatrix Managed Security are offering a unique Managed ICT Support service, Cyber Essentials as a Service. We guarantee that your organisation will be compliant and pass the certification requirements for Cyber Essentials.

### Patch Management

---

As a Compliance focused organisation, ensuring that patches are up to date is a key factor of our service delivery. Patch management can be detrimental to your organisations security if not managed correctly, a typical example of this is WannaCry, which exploited out of date Windows operating systems to deliver a ransomware attack which locked millions of people out of their files. There are substantial security patches within applications such as Adobe Acrobat Reader, Adobe Flashplayer and Java that require regular updating to avoid exploitation of security loop holes.

Curatrix Managed Security provide all of this as part of our packages to ensure maximum uptime and reduce the risk of cyber threat through unpatched software or applications.

To support you, our industry-leading Patch Management Operation Team monitors sources of intelligence from:

- Microsoft
- Microsoft Security Bulletin
- Application vendors
- Common Vulnerabilities and Exposures (CVE) system
- Automated crawler systems
- And more

### Anti Malware

---

Curatrix Managed Security provides enterprise Anti-Virus solutions that are leading the world in Malware detection and quarantine, along with Cyber Resilient Backup to provide advanced and secure Data Protection Solutions.

Our solution uses Default Deny technology to prevent untrusted processes and applications from running and infecting. Our powerful Advanced Anti Malware product is capable of removing virus's, worms, trojans, rootkits, hidden files and malicious registry keys hidden deep within a system and ensures that real time scanning provides continued automated protection.

## Security and Auditing

Becoming compliant is more than demonstrating policy adherence, it's the ability to report on data access and carry out full and detailed investigations on breaches. We understand this and have put together packages that provide access to an advanced Security and Compliance system that enables you to run full investigations into user activities and data access when required.

The system provides you with the ability to:

- See when users Open, Edit, Copy, Download and Delete documents
- Track the physical locations that the activities originate from
- Monitor administrative activities such as permissions and password changes
- Employ Data Loss Prevention policies to stop staff sending confidential information out from site
- Configure retention policies for documents and emails to meet compliance regulations
- Lock down access to corporate materials to company owned devices and/or compliant personal devices
- Remote Wipe corporate data from lost or stolen devices
- Much more

These features are provided to enable you to fully manage user experience, mitigate risk and fulfil compliance obligations from a single, secure system.

System Protected

## Compliant ICT

ICT is subject to more and more Accreditation and Certification, demonstrating compliance is a time consuming process for organisations which is why Curatrix Managed Security offer a number of flexible subscription packages tailored to ensure your organisation meets the strict policies associated with:

- Digital Privacy (GDPR)
- Employee Awareness Training
- Information Security
- ISO:27001 Implementation
- ISO:27001 Audit
- Cyber Essentials Accreditation
- Cyber Security + Accreditation and audit

We are also certified to deliver organisations with specialists virtual roles for your organisations compliance including:

- Data Protection Officer (DPO)
- Chief Information Security Officer (CISO)
- Information Risk and Security Officer (IRSO)
- Whistleblowers Hotline Services

All of our specialists are highly qualified and certified to the highest levels of Data Protection, Cyber Security and ISO implementation and Auditing available. We seek to provide independent advice, training and audit services, the focus of Curatrix Managed Security is in telling clients the facts without sugaring the pill. Digital Health is the key issue confronting organisations in the Digital Age and we have addressed a number of these areas with our managed services.
