Technologies

*'Technical Specialists in
Cloud Backup & Disaster Recovery'*

**How can Curatrix Technologies
help your business?**

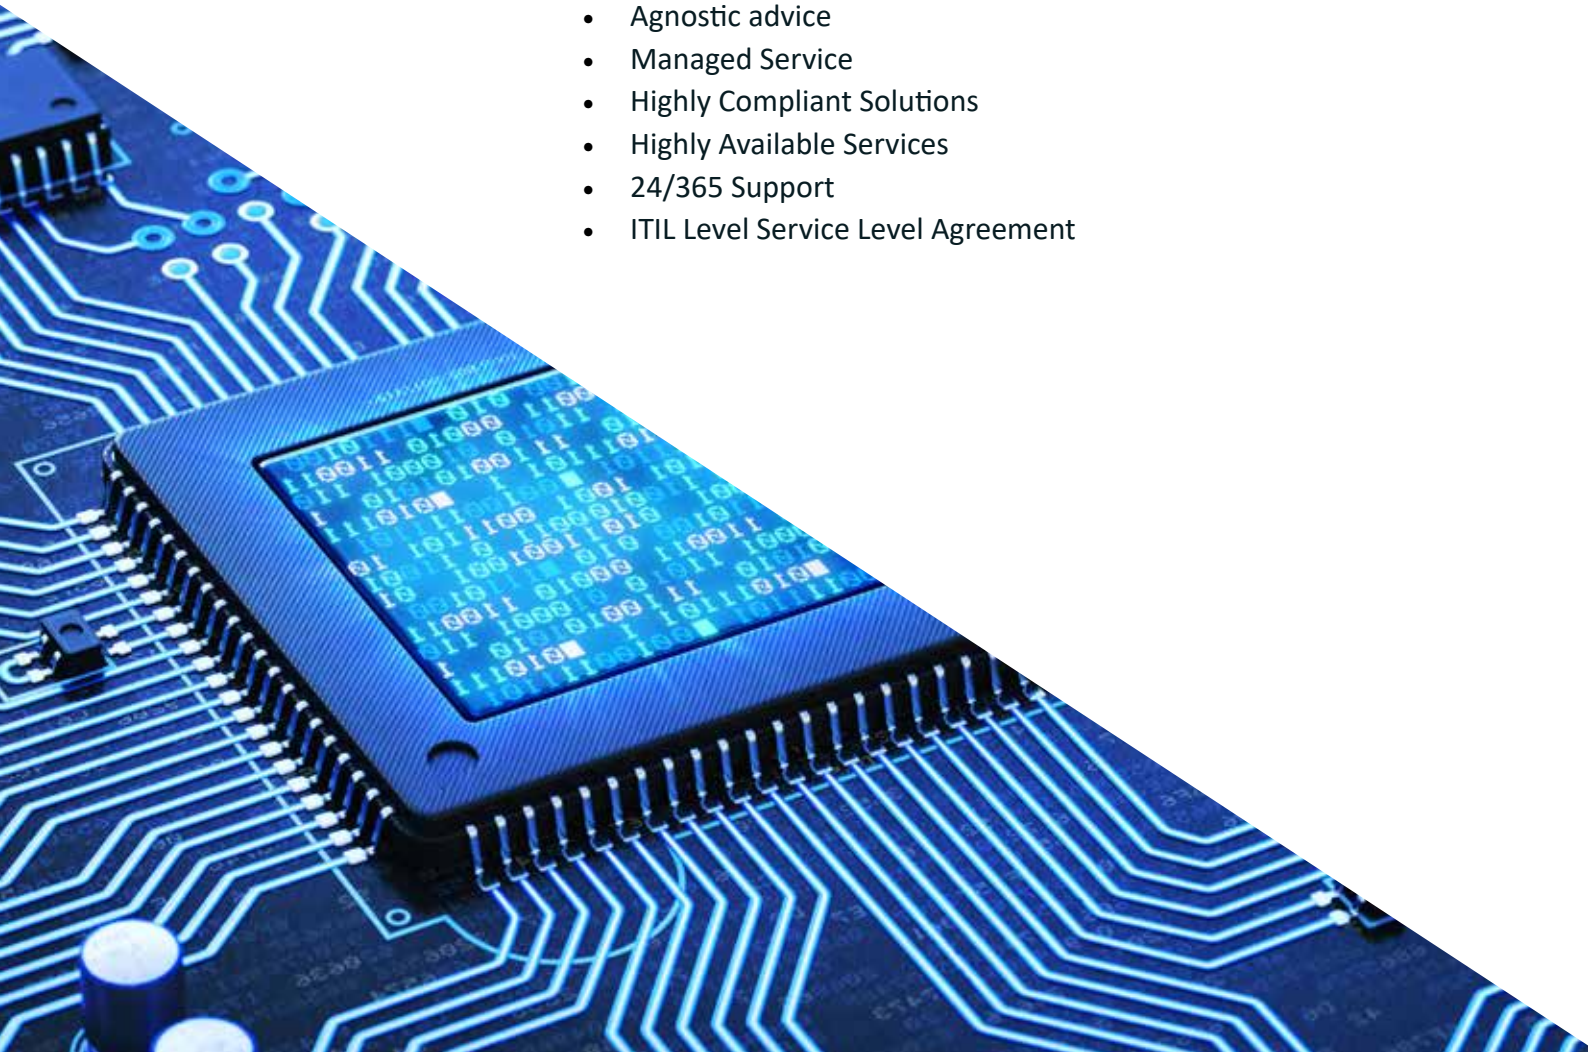

Backup

Curatrix Technologies delivers Fully Managed Backup solutions to organisations by delivering industry leading software product, tailored to the needs of the customer. By working closely with internal IT teams, Business Owners and incumbent IT Service Providers we are able to analyse the needs of the customer and deliver robust solutions to meet technological requirements, whilst remaining within budget constraints, often providing reduced Total Cost of Ownership on the solution as a result.

By working with numerous Backup and Disaster Recovery software vendors, we are able to offer applications and solutions to meet customer expectations by focusing on particular requirements and providing the correct tool for the situation. In our experience, no single solution can adequately meet every customer requirement, and we work with you to understand what you are trying to achieve to ensure we meet your requirements to the fullest.

Key benefits of using Curatrix Technologies Backup solutions:

- Technically correct solution for your business
- Agnostic advice
- Managed Service
- Highly Compliant Solutions
- Highly Available Services
- 24/365 Support
- ITIL Level Service Level Agreement

Disaster Recovery

With our product portfolio, we offer numerous options for Disaster Recovery that provide Organisations with different levels of availability as per their requirements. Our unique approach to providing technically accurate advice can not only save your business from the effects of an event, but can reduce the impact of the financial burden associated with such invocations.

Curatrix Technologies Disaster Recovery solutions are based on the business requirements and not product limitations.

Cold DR

Cold DR is our entry level DR as a Service offering and is targeted at VMWare and Hyper V environments. We take frequent backups of your services in their Native format and in the event of an outage, we can restore your servers directly into our DR infrastructure. Only at time of invocation do you pay for the compute resources, ensuring that you are never paying for resources when not using them.

Warm DR

Warm DR is the next level up from our Cold DR service and automates the recovery of your services directly onto our DR infrastructure upon completion of a backup. The incremental restores of your data ensure that your RTOs are fast and you can be up and running in as short a time as possible.

Hot DR

Hot DR is our flagship DR option and provides live, Asynchronous Replication of your virtualisation infrastructure directly into our DR infrastructure. This option provides unrivalled RPOs and RTOs guaranteed under 15 minutes and typically under 30 seconds.

The key advantages of utilising Curatrix Technologies Disaster Recovery as a Service are:

- Recover in Minutes
- Virtual Environments
- Bare Metal Restores

Long-Term Archiving

Whether your retention policy or regulatory requirements are 6 months or 30 Years, Curatrix Technologies has agreements in place with various Tiers of Data centre enabling us to archive data from NHS Patient data to Financial transactions and all data in between. Our archiving solution indexes Data and provides an archive function that leverages Microsoft Azure, Amazon Web Services, Google Cloud and of course our own infrastructure within Highly Available data centres selected specifically for their geographic and vendor resilience.

By placing ourselves at the forefront of the Data Protection industry, we provide Enterprise Disaster Recovery and Backup solutions to organisations of all size. By ensuring that our portfolio contains a plethora of products, and by maintaining a strong relationship with the software vendor, we are always able to offer our customers a first-class service with a top quality platform.

"Backup and recovery solutions are, in essence, an insurance policy for corporate data, and the value of this policy lies in the ability to successfully recover data when needed"

**DISASTER
RECOVERY
PLAN**

Our **Attack-Loop™** Prevention Solution

Our comprehensive malware-in-your-backup(s) solution offers:

Attack-Loop™ Prevention:

Our cyber-enabled data collector (DS-Client) stops unauthorised code from penetrating your backup and recovery streams.

Prevents malware in new backups, and stops malware from being recovered from older backups.

Zero-day Exploit Protection:

Our signature-less technology checks and quarantines malicious code upon entry into the backup repository and prior to recovery into your environment.

Two Factor Authentication (2FA):

This extra layer of security prevents the unauthorised deletion of backup repositories.

Variable File Naming Conventions:

Viruses looking for specific file names to attack will not find them. Our solution allows you to rename your file repositories in non-standard formats to prevent recognition and deletion of your backups.

Our solution also includes...

Enterprise Data Protection

Regardless of size or complexity, we ensure your organisation's data will be recovered back to any point-in-time and on any endpoint device.

Cloud SaaS Protection

We protect and recover data within SaaS based apps (e.g. G Suite, Salesforce.com, Office 365) regardless of where the data resides.

Business Continuity/Disaster Recovery Solutions

Our disaster recovery solution reduces downtime from hours to minutes ensuring business continuity across all organisational units.

Compliance Management

Being NIST FIPS 140-2 validated allows you to efficiently archive, restore and wipe data to ensure your adhering to regulatory compliance..
